To determine eligibility for each program:
- `ami_threshold` must be >= a user's `platform_household.ami_range_max`
- All fields beginning with `req_` are Boolean and specify whether the matching field in `platform_addressrd` is a filter for the program (e.g. a program with `req_is_city_covered`==True will require a user's `platform_address.eligibility_address_id` to have `platform_addressrd.is_city_covered`=True, but `req_is_in_gma`==False will ignore `platform_addressrd.is_in_gma`)
